

# KOOL KAP

## YOUR AIR CONDITIONER'S NEW BEST FRIEND

### Protecting Air Conditioners Across America Since 1987

#### Why offer KOOL KAP to your customers?

Kool Kap is the only protective air conditioning cover made that is specifically designed to be a permanent addition to virtually any air conditioner.

For more than a decade hundreds of HVAC contractors throughout Florida have been protecting their customers air conditioners by adding Kool Kaps to the installation.

What Florida's contractors have known for years is that Kool Kaps are a maintenance technician's best friend. Never again, will contractors have to remove a condenser top and struggle to clean out all of the messy debris that has accumulated and now blocks the drain holes in the base of the condenser.

Kool Kap will save you time (and Money!) on preventative maintenance calls. Plus your customers will appreciate the increased efficiency and lower fuel bills they will see when operating a cleaner system. You win both ways!

#### KOOL KAPS GENERATE PROFITS

When you offer Kool Kaps to your customers you'll be doing them a great service, one that they will thank you for. At the same time you will be selling a product which allows you a high mark-up and high mark-up and high profits: 60-70%.

The installation of Kool Kap is probably the simplest task any of your technicians will ever perform, so there is no need for special training.

In less than 5 minutes a Kool Kap is installed permanently so your labor cost is almost zero. Kool Kaps stack together so storing all three sizes on every truck is easy.

Kool Kaps are also tough so they can be stored on every truck without fear of damage.

#### TARP STYLE COVERS ARE A HASSLE TO INSTALL AND UGLY TO LOOK AT!

Traditional tarp covers trap moisture causing premature rusting and they make a home look unsightly. Tarp style covers have to be put on and taken off, then stored when not in use. No homeowner enjoys this messy task - and it is bad for the unit.

Holes develop in standard covers rendering them useless. Straps wear out and break, which often results in the cover blowing off the unit.

Anyone can install a Kool Kap in less than 5 minutes without any tools and the installation is permanent so you never have to worry about storage. Kool Kaps don't develop holes, they don't blow away and they look great on any air conditioner. There's no better way to protect an air conditioner than with a Kool Kap.

#### For Air Conditioners - Corrosion is Public Enemy #1

Debris built-up inside this condenser, trapping water which has prematurely rusted away the entire base of the unit rendering the system inoperable.

It's inevitable, mix water and metal and you get rust. The only way to prevent water from gathering inside a condenser is to drain it out. For that to happen the drains must be clear and free of debris.

Nothing is worse than an angry homeowner blaming the contractor for a prematurely rusted condenser. The solution is to install a Kool Kap on every A/C unit.

### 5-YEAR GUARANTEE

Every Kool Kap comes with a full five year replacement guarantee.

Most condensing units are tucked away on the least used side of the house wedged between overgrown bushes making them very difficult to work on.

This is good for aesthetics, bad for the condenser and even worse for the technician.

Leaves, twigs, pine needles, bugs and other debris all fall into the condenser through the fan grill and get trapped in the bottom of the unit -and you have to clean it out.

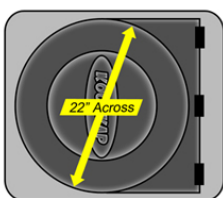

This is messy and time consuming work that technicians hate to do and contractors hate to pay for. Your solution is a simple one.

Kool Kap reduces your technicians work time on annual maintenance by eliminating the time it takes to clean out the condenser.

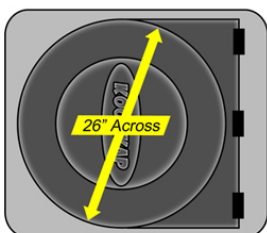

Kool Kaps will save you money in labor and make you profits when installed!

#### Three Sizes Assure Proper Fit

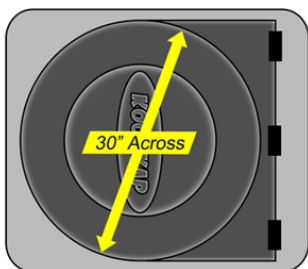

**SMALL**  
22"

**MEDIUM**  
26"

**LARGE**  
30"
